

# SECURENET ADDONS – ALARMPANEL

## SIMPLE MANAGEMENT OF SECURENET EVENTS

- View all SecureNet Events
- Custom filters
- Acknowledge and manage alarms
- PIN locked display
- Wall- & desk-mountable
- Central management
- Easy to handle
- Minimal training required

The metaSEC PSN Alarm Panel is an add-on for the Stanley PAC SecureNet and delivers a solution for the daily management with alarm notifications.

In case of an active alarm in a huge building, it has to be qualified to determine the type, priority and location of it.

### Example types may be:

- Unauthenticated disarms
- Area alarms
- Unlocked doors
- As well as any other possible alarm condition

Under common circumstances, security guards or other authorized persons require access to SecureNet. Sometimes this is simply not possible or would already violate the applied security policy.

The metaSEC PSN Alarm Panel displays and upcoming alarms on your devices. Layout, number and type of all alarms and their classes can be freely customized.

This way alarm notifications can quickly be determined and qualified.

Also the acknowledgement is possible with one click. All actions can be secured by our PIN code mechanism.

Surely the product supports multiple Alarm Panels in huger areas and buildings.

Top level priority alarms can be adjusted to raise acoustic notifications and fill the total screen size to enhance visibility.

A training for users of the software takes roughly a few minutes only.

The hardware can either be used as desk- or wall-mounted stations.

A full functioning Stanley PAC SecureNet installation with unlocked OEM Interface is required.

**Please contact us and discuss your idea with us. A solution is often easier and closer than you believe...**
