

DEAR READERS...

any expiration or company situation is often individually and can be mapped only partly in a universal blueprint .

The aim of this brochure is you and your conversation partner to help with ideas. We have left a lot of space in the middle part, so that your thoughts and concepts are not getting lost.

SOLUTIONS FOR PEOPLE

True to the motto »Business is people« we align our product portfolio for the maximum benefit to the user – because there are people behind the process. If possible, intuitive technology on one side, which makes daily tasks and processes more easier on the other side.

All products presented here, found its origins in a customer situation with a specific requirement from the daily routine. This procedure we have maintained in the development over the years. It allows us to preserve practical knowledge in products and to provide a solution, which does not require a lot of unnecessary ballast.

Another advantage of this principle is that the products are very closely interlinked and grab processes seamlessly.

A FEW EXAMPLES FROM PRACTICE:

- Visitor management recognized guests, which in case of need, be notified by the alert server
- Disruptions or service request can be scheduled to the nearest available mobile service or security staff
- Information terminals, which turn in case of evacuation into dynamic signs

We hope to give you with this brochure good tools to the hand. Contact us and discuss your idea with us. A solution is often easier and closer than you think ...

SILENT ALARM OR FACTORY ALARM - ROGER.

Silent alarm, automatic notification or accessibility by individuals or groups in emergency scenarios are current issues. The quick response in case of accidents on factory premises or the subtle to recovery to help in escalations in public authorities – all these functions are powerful and flexible ready our alerting server.

Normally, the alarm server will be integrated as a subsystem in an existing telephone system. Alternatively, Roger also independently communicate with the outside world via dedicated lines (ISDN, GSM, VOIP).

MOBILE INFORMATION DISTRIBUTION – MIDAS.

The increasing demand of mobile applications in everyday processes is an ever increasing trend – also in the security industry, this need is felt. These include but are not limited to access to cameras, intercoms or switching contacts. MIDAS, as cross-platform solution, delivers the interface between internal processes and the mobile terminal of an employee .

Currently smartphones, tablets, smart watches and desktop PC's can be involved in the process and securely managed centrally. In the case of loss or theft of a device, it can be locked remotely. The displayed data can be made from almost any third system.

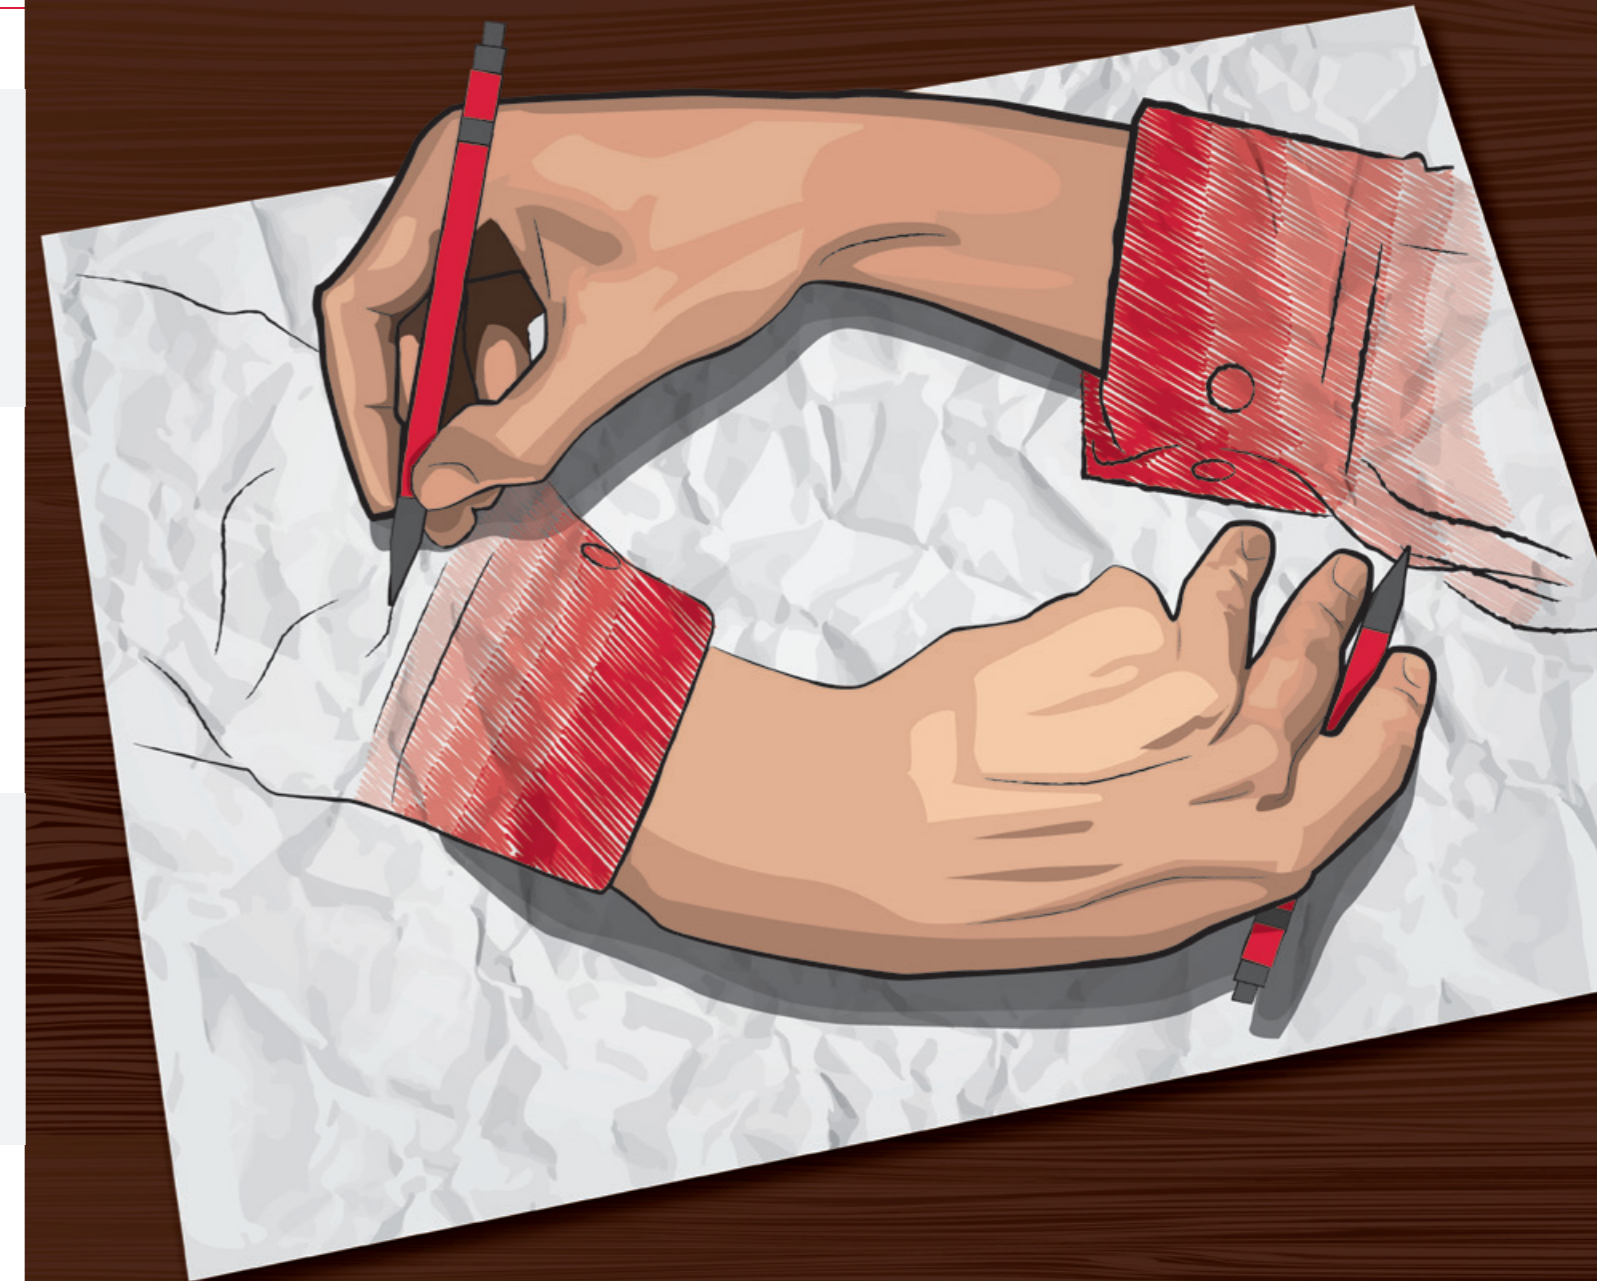

VISITOR MANAGEMENT – JAMES.

The efficient management and processing of visitor flows in companies and public organizations is becoming increasingly important. Be it the management of visitors or the execution of certain procedures on arrival or departure. Recurring tasks can be done structured and fully automatic. Visitors also have the ability to complete their registration on their own at self check-in counters.

Interaction with access control systems creates another level of information. This integration allows e.g. in case of evacuation, the accurate determination of people in potential danger zones.

INTEGRATED PROCESSES FOR INTEGRATED PROCESS EDITING

The broad integration of trades generated benefits and is very valuable for the user in the daily operations. From the perspective of the operator processes can be streamlined and therefore cost optimization can be achieved. The reduction in personnel expenses is in the foreground for our products.

VISITOR MANAGEMENT

DATA-/INFOTERMINALS

- Triggering via desk phone, covered key or PC Client
- Override / listen into the room
- Emergency conferences
- Acknowledgement and logging
- Digital batch card
- Auto learning function for cyclic briefing

- Control console alerting
- Rapid response to accident / production disruption
- Automatic and manual tripping
- Automatic team conferences for briefing
- Alerting via phone, mobile phone, SMS, E-mail
- Connection to BMA, EMA or relay contacts

- Smartwatches/Wearables
- Subtle providing of information
- Checklists / To-Do Lists
- Support merchantable Terminals »BYOD«
- Real-time feedback

- Reduction of working material
- Increasing the perceived tasks
- Dynamic people control
- Sending of tasks and action instructions
- Positioning and tracking
- Terrain maps

- Control over visitor stream
- »Come/go«-checklist
- Tracked training
- Reservation of resources
- Connection to access control systems
- Self Check-in-switch support
- Scanning and verifying of sovereign identity documents

- Welcome splashscreens
- Info panels
- Inhouse navigation
- Evacuation mode for dynamic escape route marking
- Digital Signage
