JAMES
FEEDBACK TERMINAL

J

THE JAMES FEEDBACK TERMINAL

As an additional feature of our Visitor Management System JAMES or as a stand-alone solution, our newly developed Feedback Terminal is now available for use. Consisting of a touch display and a lockable floor stand, the terminal is perfect for use on site. Due to its low weight of approx. 3.5 kg, the terminal can also be flexibly set up in a wide variety of locations.
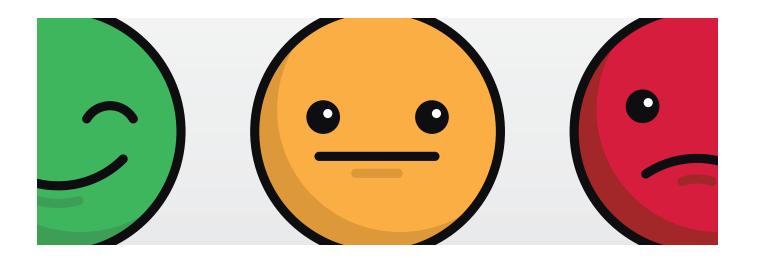

You can comfortably set up the terminal and evaluate the feedback via our online portal james-do-it.com. Naturally, the texts are freely configurable and the languages can also be adapted.

The change from a pure feedback terminal to an information terminal can also be carried out quickly and easily online. Upload e.g. terrain maps to the location overview and offer your visitors an additional added value or use the tablet to display company presentations or the current canteen menu.

We offer all this on the basis of a lean monthly rental concept. For more information and a non-binding offer, please contact us. We look forward to your inquiry.

THE MAIN FEATURES
OF THE FEEDBACK TERMINAL

Feedback function (freely configurable)

Optimized for touch displays: Large buttons, clear interface

Also usable as information display (presentations, list of exhibitors, etc.)

Display of maps

Multilingual feedback screens

Connectable via WLAN or mobile phone cards (not included)

Easy administration and configuration via online portal

Simple evaluation via analysis dashboard in the online portal

Illustration: Evaluations and analysis of the feedback
