

JAMES

LICENSES, FEATURES AND MODULES

MZF – THE CORE TECHNOLOGY THE BASE OF ALL PARTS

The so-called MZF is the basic environment for the entire product world of all metaSEC products and processes. It is available for licensing in different sizes depending on the project and application area. The licenses range from M to L and XL, Enterprise and Project, whereby the latter version is only available for large projects with individual customizing

Currently, three main products can be licensed:

- **ROGER** – Our alarm server for alarming and critical communication
- **MIDAS** – Mobile data distribution and process management
- **JAMES** – Visitor management and control of security-relevant interpersonal processes

All Modulees require an explicit activation via a separate license key. The MZF software is suitable for the operation on physical as well as virtual environments and is offered according to the user needs.

Since the MZF serves as a basis, it must first be purchased in the corresponding license. In addition, there is the respective software base such as JAMES or ROGER and, if necessary, the additional Modulees such as the JAMES logistics module.

THE LICENSE CONCEPT AT A GLANCE

In order to be able to guarantee exactly the right features and prices for different user needs, we have provided the required basis (MZF) with different licenses. The respective expansion levels essentially depend on the number of hosts, i.e. the number of people who should be enabled to invite visitors. This parameter usually also provides a direct indication of the size of the respective company and the amount of visitor traffic. This is an important indicator for the scope of functions of the license packages. The modules that you need for your project are also decisive for the selection of the right license. Because of complex requirements, certain modules require a larger basic version. So it may happen that despite a small number of hosts a larger license has to be purchased.

The license level „Project“ has a special status. The SDK allows the customer to customize the product on almost all levels. It is possible to customize the look & feel as well as internal processes. Pricing is also individual and requires coordination with metaSEC.

MZF - License M

- The smallest license that is best suited for small businesses with low visitor traffic (up to 10 possible hosts). Only a small number of modules can be booked here.

MZF - License L

- This license is suitable for medium-sized receptions and a larger number of hosts (up to 50 possible hosts). Here you can book an extended number of modules.

MZF - License XL

- This license is suitable for companies with many visitors and a very high number of hosts (up to 200 possible). You can also book all modules here.

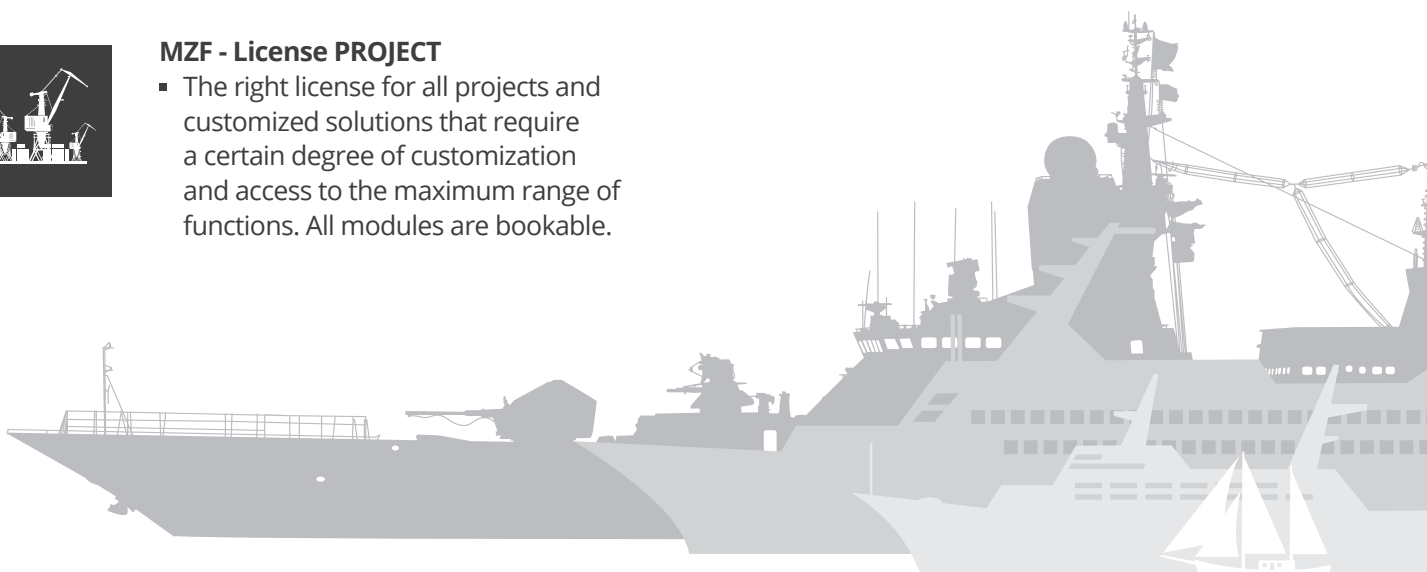

MZF - License ENTERPRISE

- Suitable for companies with various locations and branch offices or very many visitors or inviting persons (unlimited number of hosts). All modules are bookable with this license.

MZF - License PROJECT

- The right license for all projects and customized solutions that require a certain degree of customization and access to the maximum range of functions. All modules are bookable.

STEP BY STEP TO THE RIGHT SYSTEM

Software licenses can be complicated. As explained in the adjacent diagram, however, the path to the perfect JAMES system is quite simple.

1. First, choose the right installation environment for our visitor management. Whether hardware appliance or virtualization, we have the right solution for every customer requirement.
2. Then select the appropriate MZF license. The explanations which size is suitable for you can be found on the previous pages. This also depends on the desired modules, because not all modules are available for every license size. Which modules are available in which license model can be found in the table in the chapter „modules“.
3. Almost done. Now select the software base: In the case of JAMES it is the JAMES base, in the case of our alarm server ROGER it would be the ROGER base. You always need this base to run the software.
4. In the last step you select the modules you need for your individual processes. Here you have a multitude of options at your disposal. Please refer to the „modules“ section to find out which these are.

Of course we are at your disposal for an individual consultation. If you have any questions, please do not hesitate to contact us!

THE JAMES FEATURES: MORE THAN JUST VISITOR MANAGEMENT

With our visitor management JAMES we have tried to think the process of visitor management in depth. And since the software has grown in close cooperation with the largest security and facility service providers, JAMES, like no other visitor management system, contains numerous functions that have been created for the interaction between personnel and software. In addition, the ubiquitous security perspective is a factor that makes JAMES unique.

In general, we understand visitor management as a sequence of various processes. Process management is therefore the basis for JAMES. And it is precisely this basis that opens up numerous possibilities that can also be used in a wide variety of industries and vertical markets. We call this „creative use of resources“.

But it is precisely these interesting challenges that constantly create new functions and features, making JAMES unique. We have bundled these various features in different license models in order to be able to offer different users exactly the right solutions.

On the following pages you will find all functions that JAMES has to offer. Simply compare these tables to find the right license for you. If you have any questions, please do not hesitate to contact us for a detailed consultation.

- ☐ can be ordered optionally (modules)
- ✓ inclusive

JAMES	M	L	XL	ENTERPRISE	PROJECT

Management of resources e.g. social rooms			✓	✓	✓

JAMES MODULES - USER-FRIENDLY BUNDLED FUNCTIONS

Modules bundle the numerous functions of JAMES into user-oriented packages. Some of these are already included in the different licenses or can be added as required. For example, logistics and video analysis are modules that are available under the XL license and extend regular visitor management.

The modules also include all extensions such as the collection point recording, the connection to our alarm server ROGER and various other interfaces, e.g. to ERP systems, document scanners or access control.

Modules such as our JAMES@work, on the other hand, bundle all functions that are relevant for a specific area of application, such as in this case for use on construction sites. But there are also two modules for the logistics area that contain various features for this special application area.

On the next pages you will find an overview of all available modules. We will be happy to answer any questions you may have about the application and functional scope.

JBASIS

metaSEC MZF Extension | JAMES visitor management

- QR Code Management
- E-mail / SMS messages
- Apple™ Passbook Integration
- Online portal for visitors
- Attachments / Document Management
- Multilanguage (DE / EN incl.)
- One-day passes
- Arrival/Going Checklists
- Optional Global Desk for Reception / Concierge
- Optional connection to local access control

For the proper operation of JAMES, requirements are placed on the environment. These requirements can be found in the FAQ on our homepage.

JABV

metaSEC JAMES | Module Identification point

- Creation and management of identity cards
- Mapping of workflows for badge allocation
- Self-service for employees

JACC

metaSEC JAMES | Module Access control Connect

- Connection to access control systems such as Siemens, Lenel and Honeywell
- Creation of access profiles in the access control system

JACL

metaSEC JAMES | Module Extended checklist

- Extension of the regular coming/go checklists to include training videos
- Archiving of the generated PDF according to the PDF/A standard
- Signing of the PDF according to a legally compliant procedure

JACP

metaSEC JAMES | Active collection point

- Active assembly point for evacuation with self check-in terminal function
- Incl. control desk dashboards, info panels and emergency conferences (also between the individual collection points)
- Alarming of the guests via text messages or speech preserves in the respective national language
- Anonymous Interim Reports, Final Reports and 4 Eyes Control for Reporting
- Control desk dashboards and info panels
- Works council conformity
- Information for guests in the respective national language

JADC

metaSEC JAMES | Module MS Active Directory Connector

- Licenses, features and Moduleazur connection to a Microsoft© Active Directory
- Synchronization of users and groups
- Multi-client capable
- Multidomain capable

JAPI

metaSEC JAMES | Module API Restfull Portal

- Modules for interaction with the JAMES Middleware via REST API.
- With the REST API 3-rd party products can be connected bidirectionally.

JAWRK

metaSEC JAMES | JAMES@work (construction site management solution)

- Detached system for the recording of movements on a construction site
- Arrival / Departure Monitoring
- Introductions and trainings
- Presence lists for e.g. evacuation or customs control

**JCPR****metaSEC JAMES | Module License plate recognition**

- Recognition of vehicle license plates via camera connection, e.g. for access control
- API control for external systems
- Modules do not include the required camera technology and software

**JDESS****metaSEC JAMES | Module Desco Connect / document scanning**

- Modules for connecting the Desco Penta-scanner hardware
- Extraction of the MZR strip and verification of identity documents
- IMPORTANT NOTE: The storage of German identity cards is prohibited by law and strictly regulated. The images of foreign documents can be processed.

**JDIALOG****metaSEC JAMES | Module JAMESdialog**

- The dialog software JAMESdialog enables simple conversations via dialog blocks

**JERP****metaSEC JAMES | Module ERP Connect / Middleware**

- Connection to external ERP processes
- IMPORTANT NOTE: The customer or his service provider has a duty to cooperate in the connection of or to external merchandise management processes.

**JEVENT****metaSEC JAMES | Module Event**

- Event management
- Generation of anonymous QR Codes
- Mass import of participant data from CSV files
- Automatic checking of known visitors in house prohibition lists, etc.

**JFF****metaSEC JAMES | Module External companies**

- Administration of external companies and their subcontractors
- Granting of access authorisations with autonomy and partial autonomy

**JGDB****metaSEC JAMES | Module Global Desk Basic**

- Concierge workstation for the reception area

**JGDA****metaSEC JAMES | Module Global Desk Advanced**

Concierge workstation for the reception area with extended range of functions

- Alarm triggering
- Control of contacts and connected peripherals
- Service book
- Key management

**JGUID****metaSEC JAMES | Module Instruction and training**

- Instruction management set in the form of training courses and instructions for visitors and suppliers

**JHOTD****metaSEC JAMES | Hot Desking**

- Enhancement for posting flexible work centers and resources for work center 4.0

**JIOC****metaSEC JAMES | Module I/O Control**

- Modules for controlling IO / relay modules

JKEY

metaSEC JAMES | Module Key management

- Manage keys and other access media

JLDAP

metaSEC JAMES | Module LDAP

- Interface to network protocol LDAP (Lightweight Directory Access Protocol)

JLINGO

metaSEC JAMES | Module JAMESlingo

- Simultaneous translation of conversations with the translation software JAMESlingo

JLOGB

metaSEC JAMES | Logistics Module Basic

- Management of warehouses, loading ramps, waiting areas, access roads and paths
- Granting of partial autonomy on the site (via access control system)
- Control of info displays and driver notification in national language
- Loading Slot Management
- Dashboard for the dispatcher workstation
- Multilanguage Self Check-in

JLOGA

metaSEC JAMES | Logistics Module Advanced

Enhancement of the Logistics Basis Module with the following functions:

- Solution especially for the logistics industry
- Allocation of parking and unloading zones
- Waiting slot management
- Management of entrances and exits
- Yard management
- Connection to video analysis
- Connection to ERP systems
- Granting of partial autonomy on the site (via access control system)

JMANS

metaSEC JAMES | Module multi-client capability / Multisite

- For the use of JAMES with multiple clients and companies at multiple locations
- Setup of users limited per client
- To separate organizations and locations within JAMES

JPACC

metaSEC JAMES | Module PAC Connect

- Modules for the connection of the PAC access control
- Creation of access profiles in SecureNET

IMPORTANT: The PAC Connect module requires a running PAC SecureNET. An enabled OEM interface is also required.

JPARK

metaSEC JAMES | Module Parking-lot management

- Creation and management of parking spaces
- Parking-area management
- Safe parking (women's parking, safe transition from vehicle to building)
- Truck parking management, overflow control
- E-loading point
- Virtual Consierge

JPWA

metaSEC JAMES | Self-registration app

- Operating system independent and browser-based
- Responsive and suitable for all end devices
- The WebApp is platform independent and runs on any HTML5-enabled device.

JRCON

metaSEC JAMES | Module Roger Connect

- Module for connecting the metaSEC Roger alarm server

**JROOM****metaSEC JAMES | Module Room management**

- Creating and managing rooms
- Support of separable rooms
- Information on the equipment of the room
- Storage of media data e.g. room images
- Outside display for indication of occupancy status
- Room display for booking catering, FM services, room blocking, etc.
- Equality options (e.g. room accessible without barriers)

**JTENANT****metaSEC JAMES | Client license**

- License for one additional client within one JAMES basic license

**JVH****metaSEC JAMES | Module Fleet management**

- Creating and managing vehicles and drivers
- Assignment of several drivers to various vehicles
- Assignment of several persons to one vehicle

**JSAP****metaSEC JAMES | Module SAP interface**

- Extension of the JERP module with SAP® connectivity
- Currently supported modules SAP HR
- For the commissioning of the interface further effort in the environment is usually necessary, e.g. a SAP consultant.

**JWEBSTR****metaSEC JAMES | Module Webstorage**

- Connection to OneDrive, GoogleDrive, Dropbox
- More on request

**JSCC****metaSEC JAMES | Module Self Check-in Counter**

- Self-check-in counter software modules
- For independent check-in of guests, implementation of trainings, etc.
- Modules support multilingualism
- The self-check-in still needs a (touch-) terminal for operation

**JWF****metaSEC JAMES | Module Workflow**

- Creating and managing workflows for appointments, resources and visitors

**JWH****metaSEC JAMES | Module Warehouse**

- Modules for setting up and managing a mail-room
- The Registration of deliveries and collections
- Confirm / Acknowledge acceptance and
- Output of packages
- Connection to QR/Barcode Scanner for recognition of shipment numbers

**JSITE****metaSEC JAMES | Branch License**

- License to manage multiple branches within a client

**JZONE****metaSEC JAMES | Module Zone management**

- Creating and managing zones on a site

**JSOCM****metaSEC JAMES | Module Social Media**

- To connect WhatsApp and Twitter

**JSPC****metaSEC JAMES | Module Sign Pad Connect**

- Modules for the support of signature pads for the digital acceptance of signatures

AVAILABILITY OF MODULES IN DIFFERENT LICENSING LEVELS

Please note that not every module is available in every MZF licensing level. This results from the circumstance that these modules are based on functions, which are only included after a certain license size or simply only make sense from a certain project size.

On the following pages we have clearly summarized which modules are available in which licensing levels.

JAMES MODULE	ARTICLE NUMBER	M	L	XL	ENTERPRISE	PROJECT
IDENTIFICATION POINT	JABV			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
MODULE ACCESS CONNECT	JACC	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
